Hello,

The following submission has been created.

Track Name: Computing, Communication and Artificial Intelligence

Paper ID: 263

Paper Title: Smart Career Navigator: A Multi-Modal AI Framework for Real-Time Skill Gap Identification and Career Path Optimization

Abstract:

The global employment landscape is undergoing a paradigm shift where traditional academic credentials often lag behind rapidly evolving industry requirements. This research introduces the "Smart Career Navigator," an AI-driven framework designed to bridge the gap between education and employability. The system utilizes Natural Language Processing (NLP) for resume parsing and web-scraped Job Descriptions (JDs), combined with vector-based semantic matching to identify technical and soft skill gaps. Unlike conventional static career platforms, the proposed framework integrates real-time market data to generate a dynamic Career Readiness Score and personalized learning roadmap. The architecture incorporates Named Entity Recognition (NER), BERT-based semantic embeddings, and recommendation mechanisms to provide actionable career guidance. Experimental results demonstrate high accuracy in skill extraction and significant improvement in interview call-back rates among users following the suggested upskilling path. The proposed system establishes a scalable bridge between academic learning and industry expectations, enabling data-driven career path optimization.
